

Celebrating Robert Schaback's birthday

Martin Buhmann
University of Giessen

Abstract: On the occasion of Robert Schaback's 75th birthday in 2020, we will give a description of some of Robert's prolific work and enormous contributions to mathematics, especially to approximation theory, and here in particular to kernel-based methods. The sheer amount of Robert's papers and other work only allows us to provide a summary but I trust that several other talks at this conference will relate to his mathematics as well. It will be a great pleasure to celebrate him on this occasion.
